Active Directory - LDAP Section

In this section, we set up Active Directory using the LDAP protocol.

- "*Active*" tells us if we want Infoport to work with AD.
- "Login using Active Directory Groups relations only" it is possible to set a ban on the login of a user who does not have an Active Directorygroup assigned.
- "*Automatic Login*" determines if users will automatically log into AD if they enter the Infoport URL in the browser.
- "*Database Preference*" tells us that when logging in, it goes to the database to the users first and then to AD
- "*False Login As Host*" allows us to choose if we want a user who is not in AD to be able to log in as a portal guest.
