InfoportLauncher

InfoportLauncher.exe is a program for installing and updating the EaInfoport system.
It autonomously downloads, installs and runs EaInfoport and ensures its regular updates.

It is configured using command line parameters. If you run it without parameters, “InfoportLauncher.exe” will show basic help with a list and description of all available parameters.

InfoportLauncher.exe is a “portable” program that is installed by simply copying it to a disk. We recommend copying it to the folder “*C:\EAInfoport\Dataprojekt\Infoport*”
