Admin does not have automatic access to repositories

Question

Since version 8.5.0.8563 admin can't get into the repositories?

Answer

Now, because of audit reasons, the admin (portal administrator) is not automatically assigned access to the repository. After clicking the arrow in the top left corner, he only sees the list of created repositories.

If necessary, it is necessary to set permissions to the required repositories via "Portal Management">"User Management">"User List".
