Bookmarks - favorites

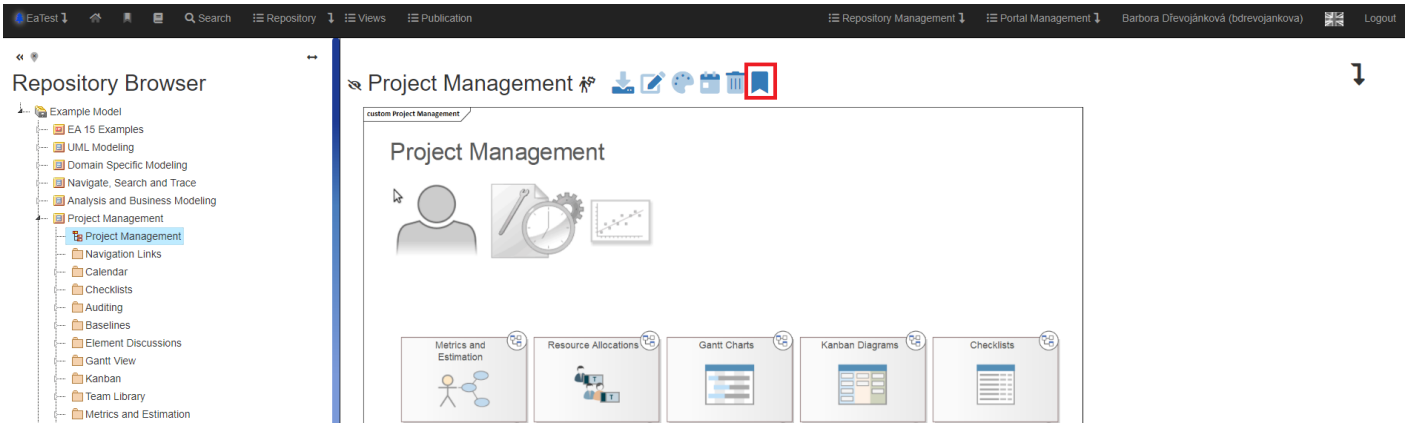

EA Infoport supports a bookmarking system. Each user has their own bookmarks (this is actually similar to favorites) and can add selected packages, elements and diagrams from the main tree. This is useful, for example, if the user is working on only one project and doesn't want to keep clicking through the whole repository structure, or just needs to mark elements (diagrams, etc.) to return to in the future.

- Personal view

Personal view

To add (*diagram, package, element, attribute or operation*) you need to click the icon.

When clicked, the icon is filled in and this means that the (*diagram, package, element, attribute or operation*) is added to the "*Personal View*" section.
