

Access to views

New functionality allows you to set limited access to the repository through views.

The repository manager can set up new "access to views" and remove "access to repository tree" to users.

Permissions can be assigned to the user or group.

Other specifications of the authorization can be set in permission on a specific package.

For example, if you have a user or a group access group and one of the views is a package in which a group or user has a ban on access, the view will not be displayed.

The screenshot displays the EainfoportT3 web interface. The top navigation bar includes links for Alpha_repo, Search, Repository, Views, and Publication. A dropdown menu is open, showing options: Users management, Groups Management, Permissions Management (highlighted with a red box), Repository detail, and Overview of notification subscriptions. Below this, the 'List of permissions' section is visible. It contains a table with the following data:

Permission	Groups	Users
Repository administrator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Access to publication	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Access to repository tree	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Editor Glossary	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Access to views	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

At the bottom right of the table, there is a 'Show 10 entries' dropdown and a 'Setup of columns' link.

Revision #2
