Assigning Users to a Group

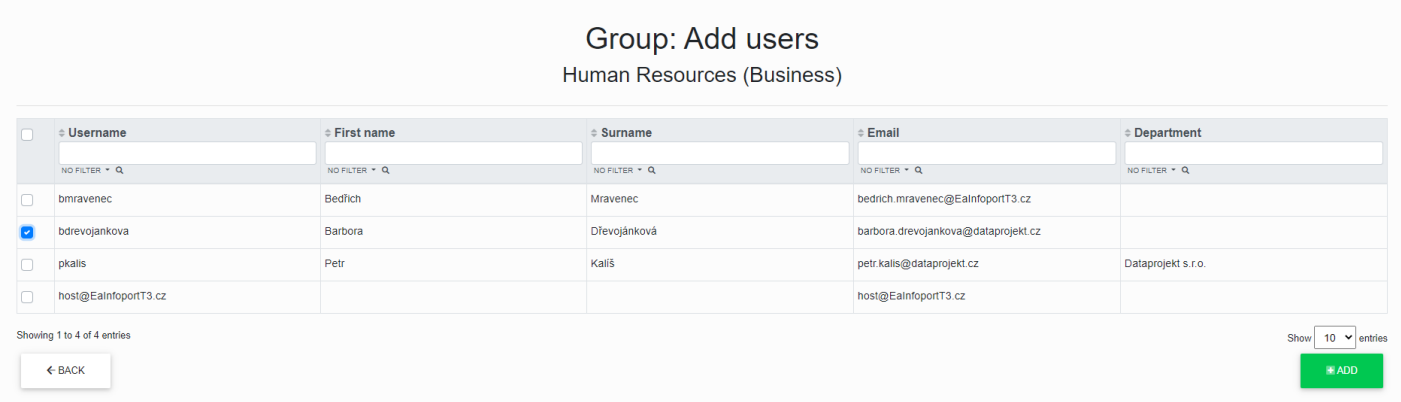

We have chosen the blue “***Users***” button.
Now we have the List of Assigned Users of a specific group for which the button was selected.
Here we can add users in the repository to the selected group in the repository or remove users in the repository from the selected group using the “***Add***” or “***Remove***” buttons and see an overview of users in the selected group.

Add

The “***Add***” button has opened a list of unassigned users where we can check the checkbox for each user we want to select, and after another click on the “***Add***” button, the checked users will be assigned to the group.

Remove

The “***Remove***” button has opened a list of assigned users where we can check the checkbox for each user we want to select, and after the next click on the “***Remove***” button, the checked users will be removed from the group.
