

Audit Logs - activation

The portal administrator must go to the Configuration Manager and set up the box for the logs he wants to activate. Save the settings and restart Infoport.

The screenshot shows the Configuration Manager interface for Serilog. The page is titled "Serilog" and has a "Working Section" indicator. Below the title, there are four configuration options, each with a checkbox and a label:

Log Path	Log Type	Service Log Write To	RollingInterval
logs	Information	Both	Day
<input checked="" type="checkbox"/> Audit for login/logout	<input type="checkbox"/> Audit for Enterprise Architect Database modifications	<input type="checkbox"/> Audit for HTTP status codes	<input type="checkbox"/> Audit for Infoport permissions

A red box highlights the "Audit for login/logout" checkbox, which is currently checked. Below the configuration options, there is a green "Save" button.
