Create a view

Create a view allows you to take a specific part of the tree and display it in a separate section. Thus, if, for example, a company's process model, organizational structure, architecture design, etc. is deeply embedded in the repository structure, this functionality allows you to make it available to readers without having to search for it in a complicated way. Thus, these are views of specific repository packages (trees) and their contents, including the embedded packages.
