

# EA Path search

If the user chooses to search by PATH, the element located on the specified path is searched.

The screenshot shows the top navigation bar with five tabs: 'Simple', 'Advanced search', 'EA Path search', 'GUID search', and 'Diagram search'. The 'EA Path search' tab is highlighted with a red rectangular box. Below the tabs is a light blue instruction bar that reads 'Find an element that is on the specified path (EA Path)'. Underneath this is a text input field labeled 'Path to element' containing the text 'Example Model.Schema Modeling.Schema Composer.Class Model.Store.Store'. To the right of the input field is a green button with a magnifying glass icon and the text 'SEARCH'.

In the "*Path to element*" field the user types or pastes the copied ea path (*it is a sequence of packages and elements separated by a dot*) and clicks on the "*Search*" button.

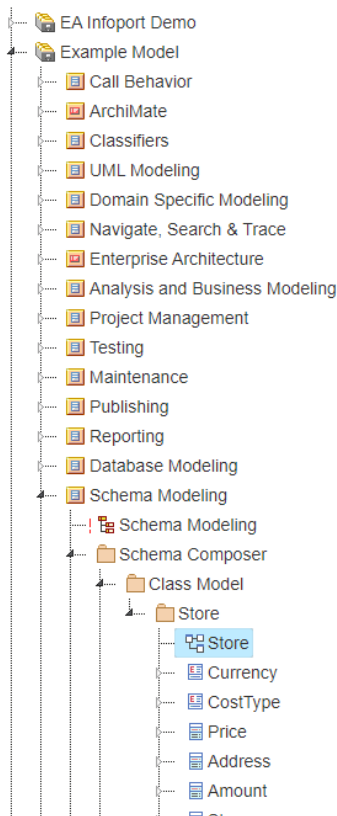

This screenshot is similar to the previous one but highlights different elements with red boxes. The 'Path to element' text input field, which contains the same example path, is enclosed in a red rectangular box. Additionally, the green 'SEARCH' button is also enclosed in a red rectangular box.

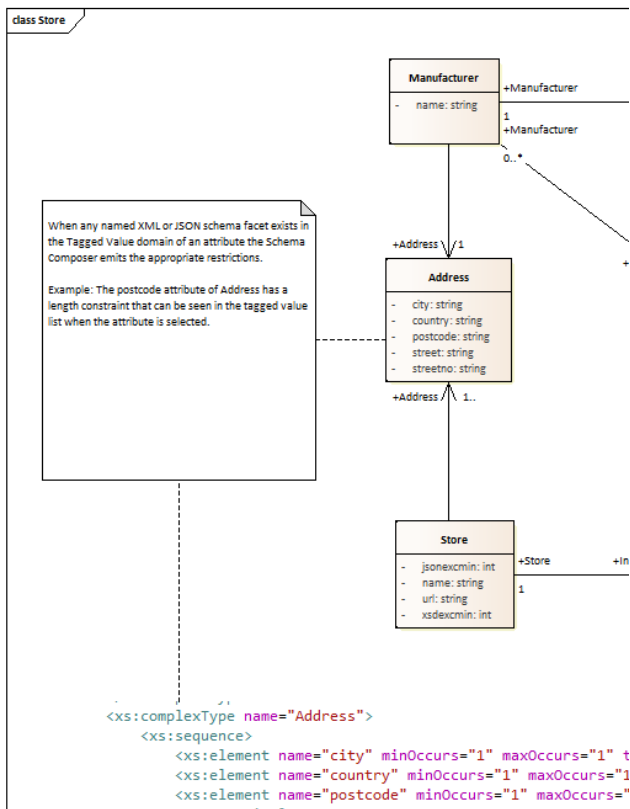

The "*Search*" button redirects the user to the element. The right part shows the artifact detail and the left part shows the artifact marked in the tree.
