List of Access Keys

newer versions - https://doc.eainfoport.cz/books/user-manual/chapter/access-keys

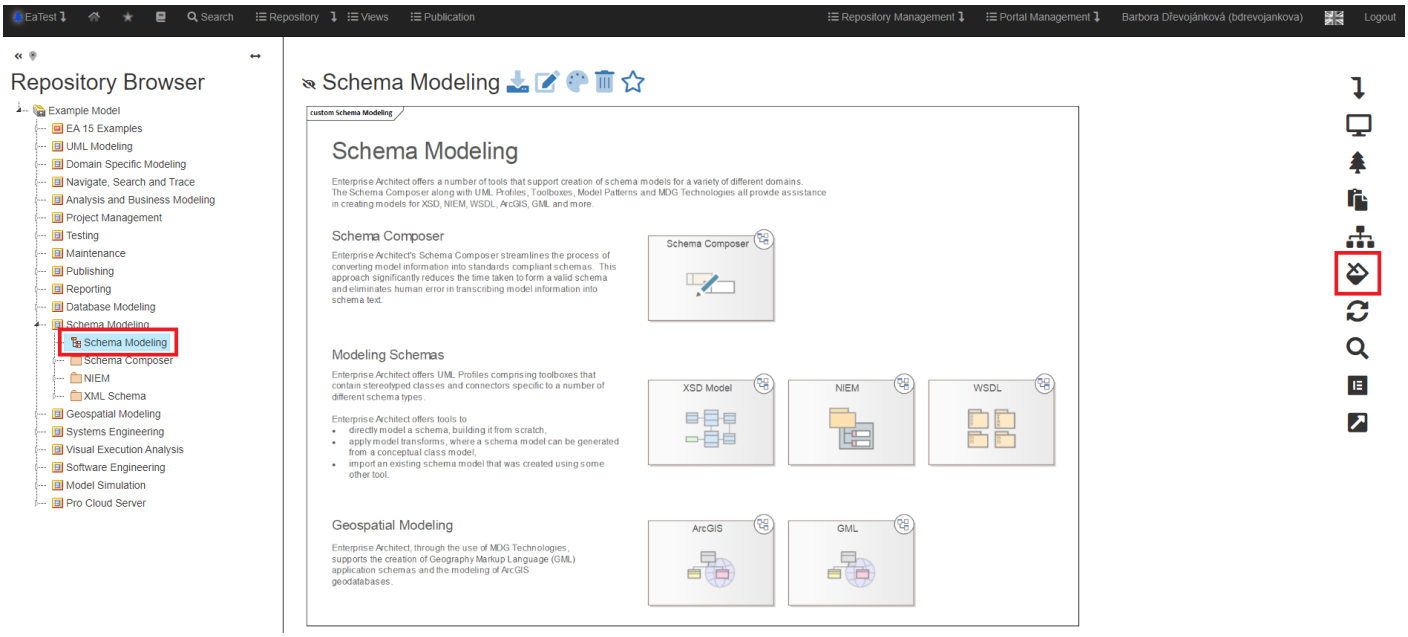

Whenever a user uses the "*Direct Access URL*" option, the key for that URL is saved in the access key list.
If a user no longer wants to be able to access the relevant address without a password through this key, he/she has the option to delete it here.

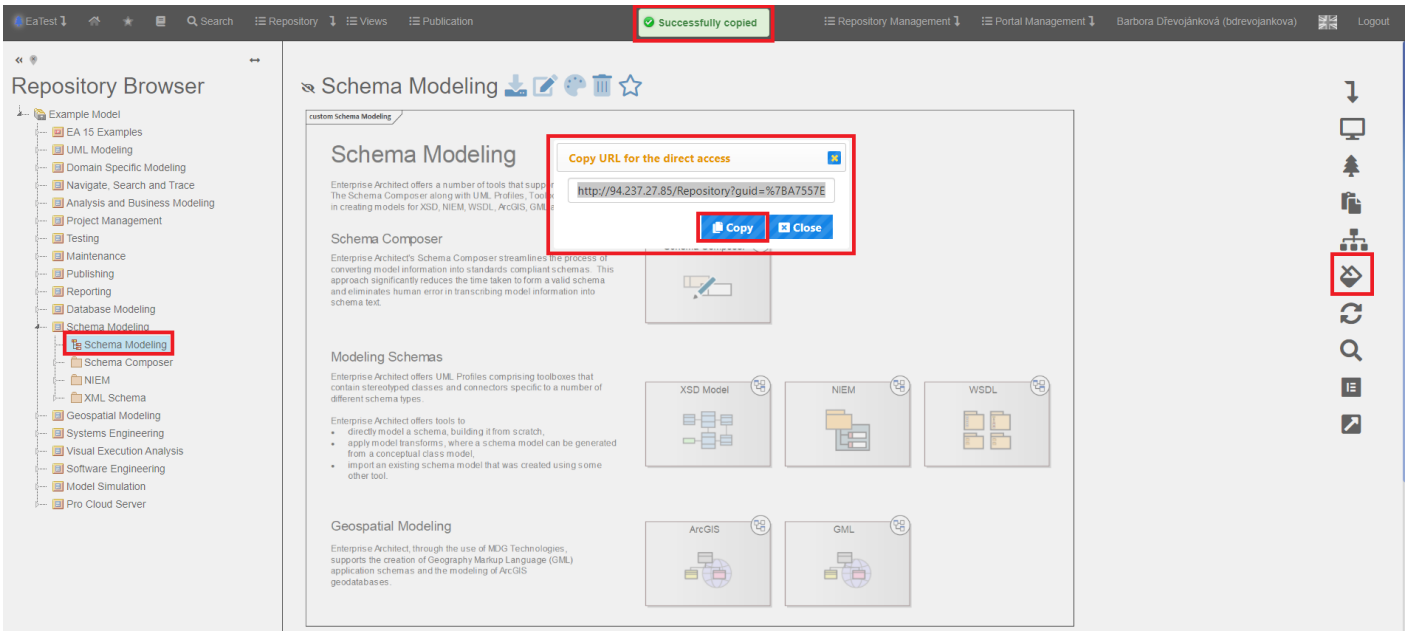

The list of active access keys is available by clicking on the arrow next to the "*Repository*" tab and in the subsequently expanded submenu on the "*Access Key List*" tab.

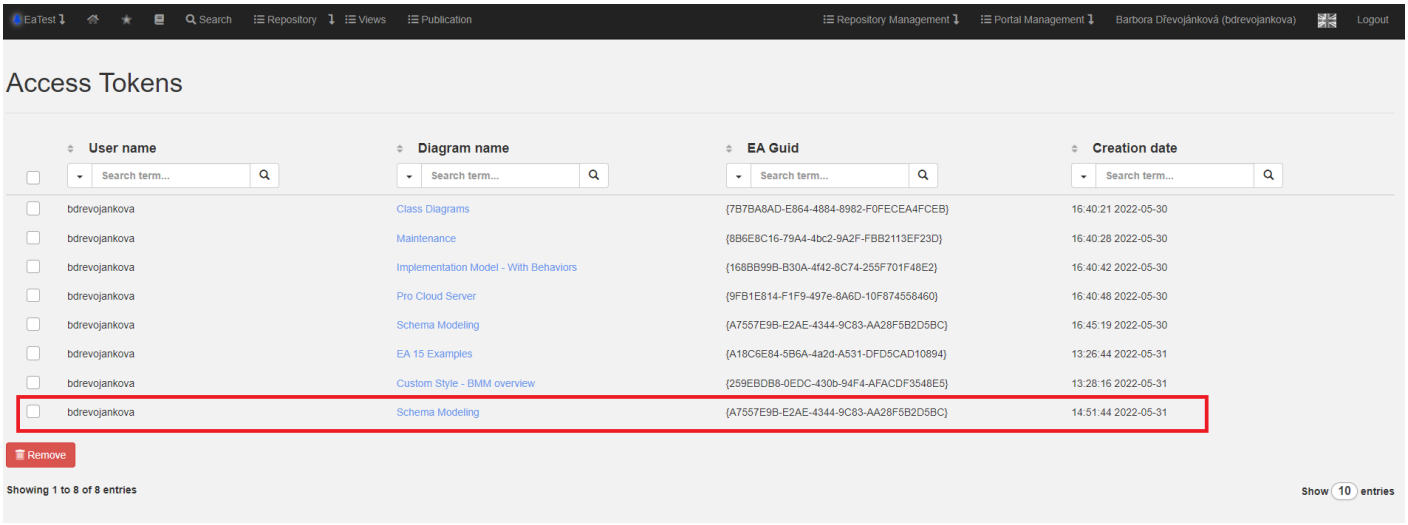

A user sees active keys in the list of access keys.
He/she can use a filter to find the appropriate key, and if he/she wants to remove it, he/she selects this key with the left mouse button and then clicks on the "*Remove Keys*" button.

To add an access key, a user finds an artefact in the repository and runs the detail – then he/she clicks on the arrow to the right to expand the menu and selects the "*Direct Access URL*" – then he/she clicks on copy and at this point the key is added to the access key list.

The key has been added to the access key list.
