

Permissions - Access to publish public keys (permalinks)

There is a new option in Eainfoport to set "Access to publish public keys" for users.

After installing version 8.7.0, users who create permalinks must set the permissions otherwise they will lose this option.

Setting option:

- 1) Portal Management > Users management > Repositories > select the required permissions
- 2) Click on Repository Model > Repository Management > Users Management > Permissions

The screenshot displays the Eainfoport user management interface. The top navigation bar includes 'Portal Management' and 'admin@EainfoportT3.cz (admin)'. The main content area is titled 'User: List of repositories and permissions' for 'Test Testovic327 (ttestovic327)'. It features a table with columns for various permissions, including 'Access to publish public keys', which is highlighted with a red box. A green banner indicates 'Successfully removed'. Below the table, there are 'ADD' and 'REMOVE' buttons. The bottom section shows a 'Repository Browser' on the left with a tree view of repository categories. The main area displays a 'Testing' repository with a diagram and a table of metadata.

Repository name	Repository notes	Repository administrator	Access to publication	Access to repository tree	Editor Glossary	Access to views	Access to publish public keys
Example		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Testing

There are a number of methods for setting up testing definitions and tracking test results in Enterprise Architect.

Two key formats that can be used for this are:

- Internal test definitions within an element.
- Attaching a custom element of type 'Test Case' to existing elements.

Examples of each format can be found using these links.

Element - Internal Tests

Test Case Element
