

Permissions - Access to publish public keys (permalinks)

There is a new option in Eainfoport to set "Access to publish public keys" for users.

After installing version 8.7.0, users who create permalinks must set the permissions otherwise they will lose this option.

Setting option:

- 1) Portal Management > Users management > Repositories > select the required permissions
- 2) Click on Repository Model > Repository Management > Users Management > Permissions

The image shows two screenshots from the Eainfoport application. The top screenshot displays the 'User: List of repositories and permissions' page for user 'Test Testovic327 (ttestovic327)'. It features a table with columns for various permissions, including 'Access to publish public keys', which is highlighted with a red box. A green 'Successfully removed' message is visible above the table. The bottom screenshot shows the 'Repository Browser' interface, specifically the 'Testing' section. A red box highlights a button in the right-hand sidebar, which is used to manage permissions or settings for the selected repository.

Testing

There are a number of methods for setting up testing definitions and tracking test results in Enterprise Architect.
Two key formats that can be used for this are:

- Internal test definitions within an element.
- Attaching a custom element of type 'Test Case' to existing elements.

Examples of each format can be found using these links.

Element - Internal Tests
