Repositories Management

Multiple repositories (databases) can be connected to one instance of the information portal. Therefore, the management of the portal and the management of the individual connected EA repositories is separate. One user can have access to multiple repositories and different rights in each of them. It is easy to switch between repositories.

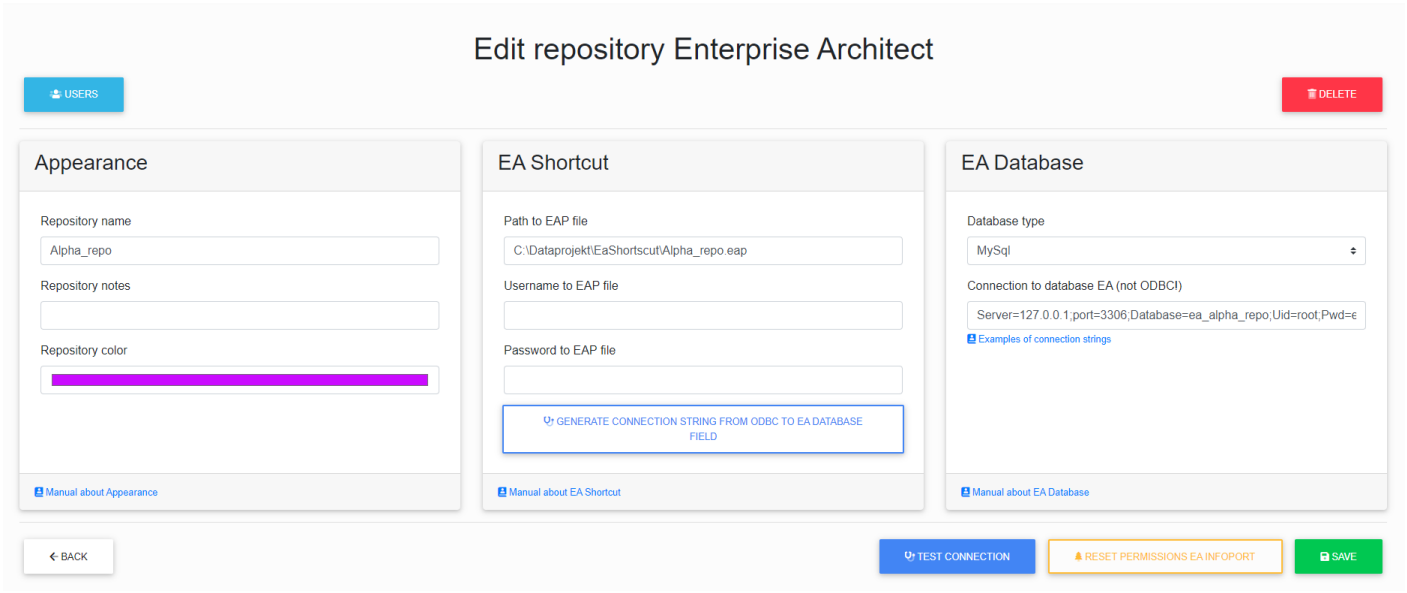

Each connected EA repository has its own administrators.

Users are registered at the portal level, and rights to repositories are assigned by the portal administrator. EA Repositories are strictly data segregated, and if a user does not have rights to a particular EA Repository, he or she cannot see it (cannot see that it exists).

This functionality is useful, for example, if a company has multiple customers. Who have data in separate EA repositories and need to present it using a single portal instance.

After clicking on "edit" the following page will be displayed Edit repository
