Setting the notification interval for diagram subscribers

The administrator must set up an e-mail server in Configuration Manager to send notification e-mails to users.

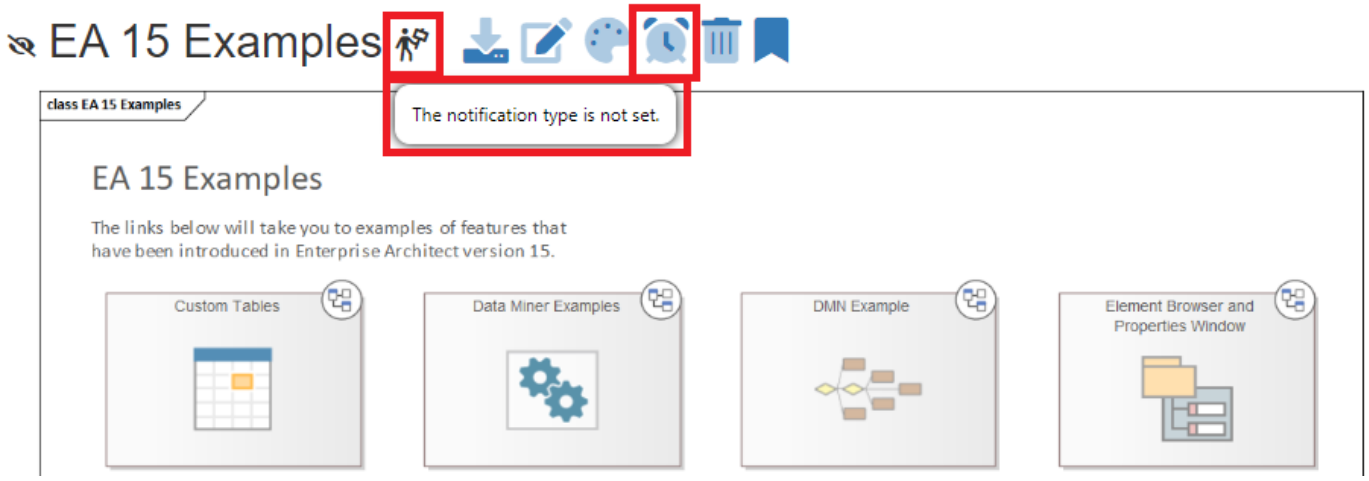

There are three notification services that notify users of changes to the diagram and the regularity is set in Configuration Manager:

- Notification Hour Job
- Notification Day Job
- Notification Week Job

The user can see an "i*nformation bar*" icon on the diagram which, when clicked, informs what type of notification is set.

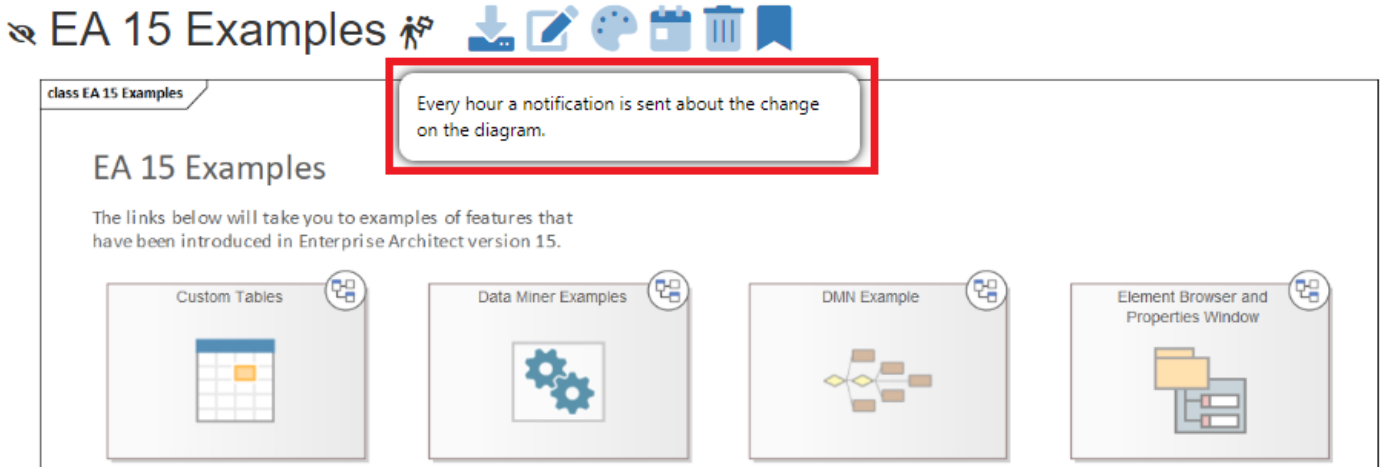

The next icon sets the notification types, ***the button for the next notification type is always displayed***!

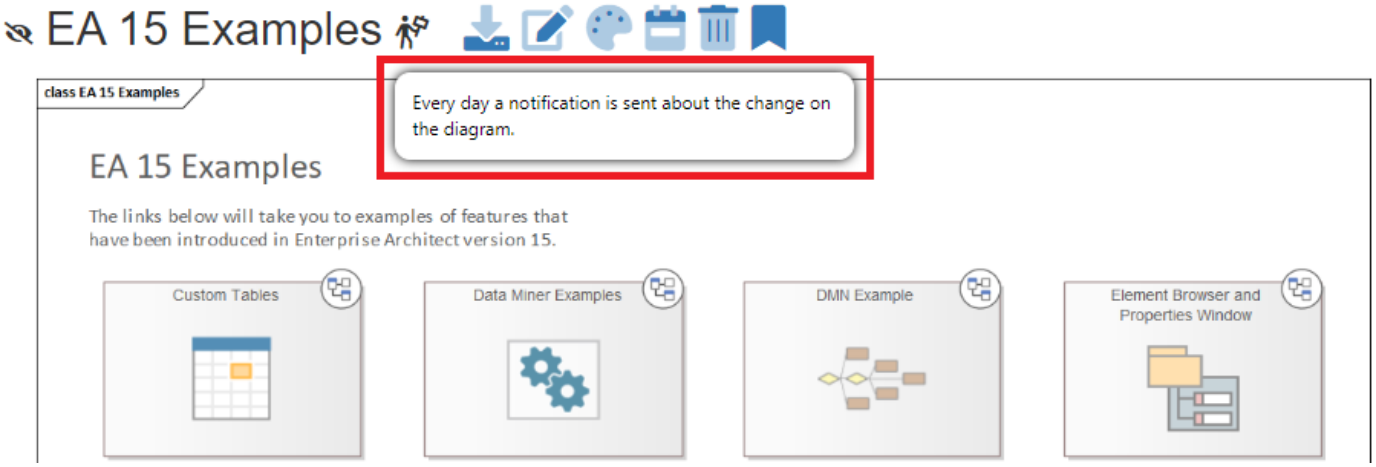

If the user sees the icon , it means that no function is set.

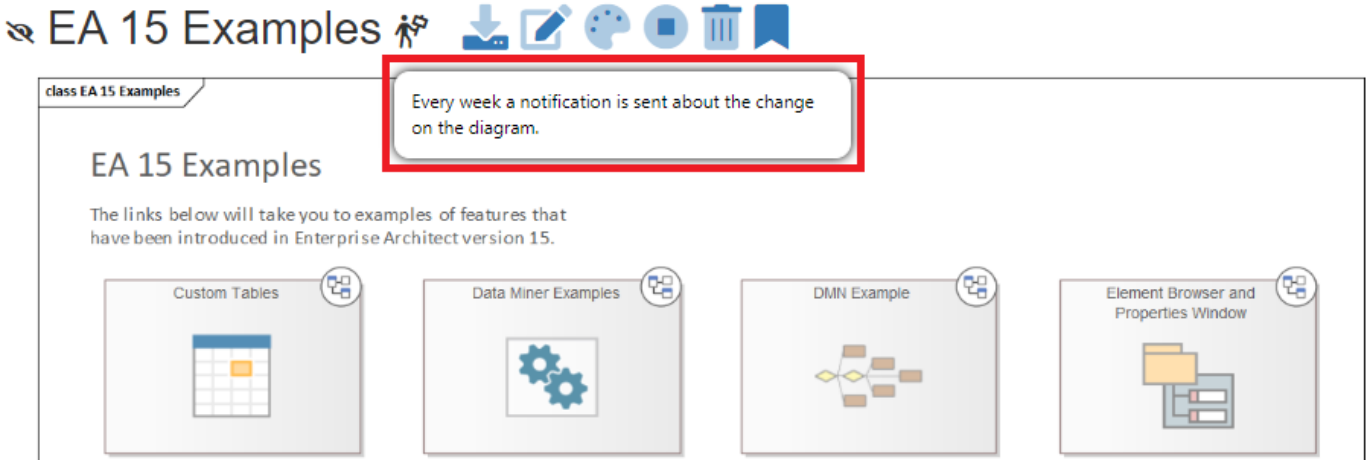

To set up an hourly notification, the user must click on the icon  and when the icon changes the sending of the diagram is set.

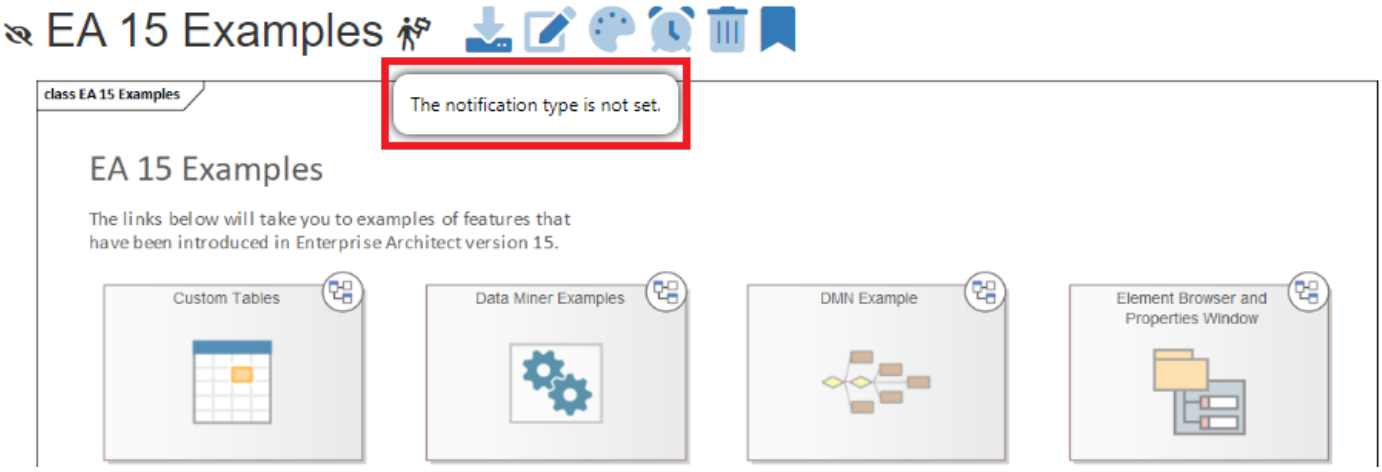

To set up an daily notification, the user must click on the icon  and when the icon changes the sending of the diagram is set.

To set up an weekly notification, the user must click on the icon  and when the icon changes the sending of the diagram is set.

To cancel the notification, the user must click on the icon  and when the icon changes the notification is cancelled.

The user can view the list of "Overview of notification subscriptions" in their user account.

The repository administrator "Overview of notification subscriptions" in the entire repository, can see in the repository administration.

The portal administrator "Overview of notification subscriptions" in the entire portal, can see in the portal administration.
